

Supreme Silver/Gold Capacitor

The metallisation of the capacitor foil for the MCap Supreme Silver/Gold consists of 99.99% pure silver, to which 1% high purity gold is added. Gold alters the crystalline structure of the silver maximizes its electrical conductivity. This capacitor uses a special inductance-free winding. Two capacitor windings are interleaved (in series), so that their inductances effectively cancel. For example, two 2µf windings are used to make one 1µf capacitor. When embedded in complete silence, instruments and voices can develop their absolute clearness and power. Tolerance ±2%.

Supreme Silver/Oil Capacitor

This product is an oil impregnated, silver metallized polypropylene dielectric capacitor. This capacitor uses a special inductance-free winding. Two capacitor windings are interleaved (in series), so that their inductances effectively cancel. For example, two 2µf windings are used to make one 1µf capacitor. High purity silver (99.99%) is used for the capacitor coating. A special oil has been chosen to contribute to an even fuller and smoother tonal richness and diversity. Mundorf Supreme Silver/Oil capacitors are arguably the best sounding audiophile capacitors available. Tolerance ±2%.

Supreme Polypropylene Capacitor

The Supreme capacitor uses the same special induction-free winding technology as the Silver/Oil capacitor. This capacitor is a metallized polypropylene film, with exceptional low loss characteristics. The Supreme is equally suited to electronics as it is for high-end loudspeakers. No matter where you use the MCap Supreme - as a coupling capacitor in your CD player or amplifier, or in the crossover of your speakers - you always get the same surprising and impressive performance. Whether your upgrading a premium system of a price conscious configuration, Supreme will deliver a significant enhancement. Tolerance ±2%
