 ${f A}$ PP/TPX based cone matches ideally with an adaptive rubber surround. The result is an outstandingly smooth frequency response from the mid woofer.

A coaxially arranged precoated fabric dome high frequency unit with a low resonance frequency, integrates with the cone driver to a point source.

The cone of the woofer acts as a horn loading for the tweeter, and the chassis of the dome unit represents the throat of this horn.

A compensation magnet and a shielding cup is mounted on the woofer magnet system to eliminate magnetic stray fields, hence the unit can be used very close to CRT`s in audio/video applications.
